

BLINK.PRO MED

ENGAGING COGNITIVE THERAPY

COORDINATION EXERCISES

Training on **BLINK.PRO MED** takes psychomotor skills to the next level and helps achieve results. It allows to train individually or in competition. Visual-motor coordination exercises are based on simple reactions to a light stimulus. The patient is to touch the right sensor as quickly as possible.

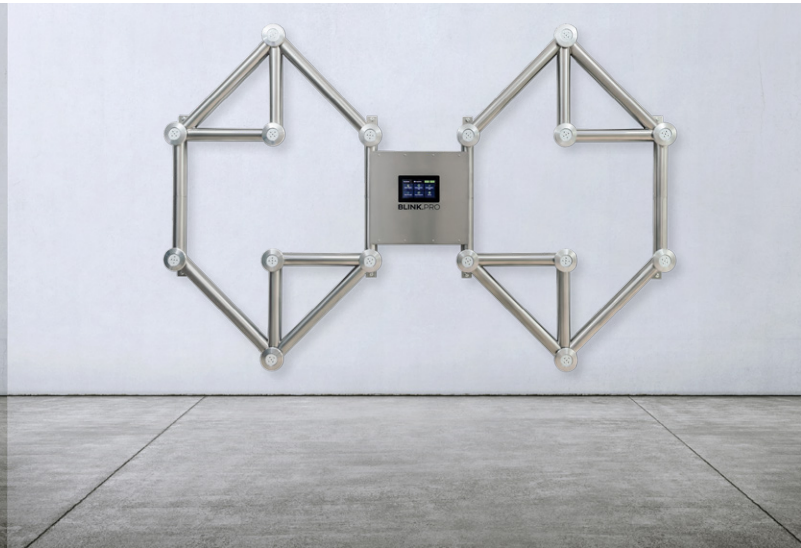

FOCUS EXERCISES

BLINK.PRO MED as a medical device supports cognitive training. Focus exercises force the patient to react when a choice needs to be made. Based on a given configuration of light signals, the patient is to pick the right sensor. The decision-making element has been introduced thanks to the different colours of the sensors.

MEMORY EXERCISES

BLINK.PRO MED allows the patient to train their memory through interactive tasks. They involve memorising light signals or sequences of such signals. Programmes of this sort stimulate the memory centre, especially the ultra-short term memory (USTM) and short term memory (STM).

Model: **Infinity Silver**

BLINK.PRO MED Infinity Silver is a Plug and Play medical device. This model is recommended for hospitals and rehabilitation centers for adult cognitive therapy. It helps improve focus, memory, abstract thinking, reduce symptoms of depression, anxiety and other emotional disorders. This long-life device is made of stainless steel.

TECH SPEC

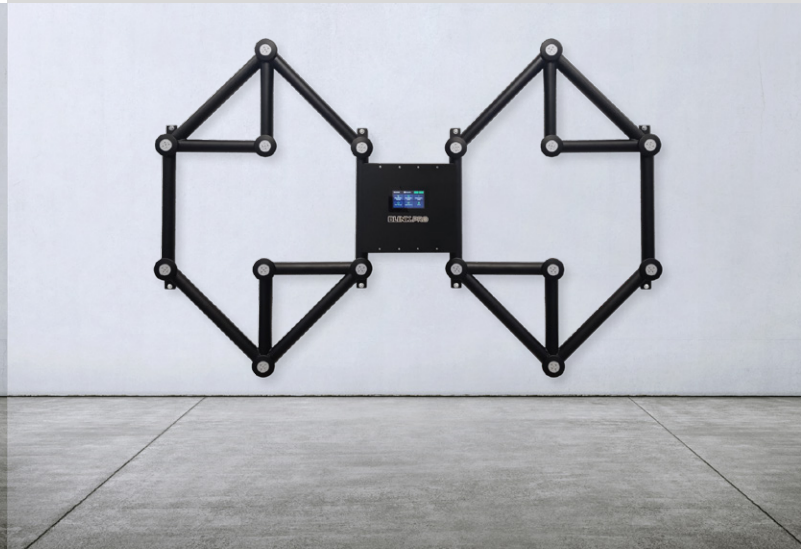

30 sensors / 210 cm x 215 cm x 90 cm (H x L x D) / 125 kg

Model: **Diamonds Silver**

BLINK.PRO MED Diamonds Silver is a Plug and Play medical device. This model is recommended for small rehabilitation centers for adult cognitive therapy. This long-life device is wall mounted and made of stainless steel.

TECH SPECS

16 sensors / 160 cm x 240 cm x 10 cm (H x L x D) / 80 kg

Model: **Infinity Black**

BLINK.PRO MED Infinity Black is a Plug and Play medical device. This model is recommended for hospitals and rehabilitation centers for adult cognitive therapy. It helps improve focus, memory, abstract thinking, spatial perception, planning and problem-solving. This long-life device is made of powder-coated carbon steel.

TECH SPECS

30 sensors / 210 cm x 215 cm x 90 cm (H x L x D) / 125 kg

Model: **Diamonds Black**

BLINK.PRO MED Diamonds Black is a Plug and Play medical device. This model is recommended for small rehabilitation centers. Cognitive therapy with the BLINK.PRO device involves biofeedback mechanisms and can be a part of compensation exercises. This long-life device is made of powder-coated carbon steel.

TECH SPECS

16 sensors / 160 cm x 240 cm x 10 cm (H x L x D) / 80 kg
